Yavapai Prescott Indian Tribe Demographic Analysis

Introduction

This analysis of the Yavapai Prescott Indian Tribe was undertaken by the Arizona Rural Policy Institute (ARPI) in the W.A. Franke College of Business at Northern Arizona University for the planning department of Yavapai Prescott Indian Tribe. The ARPI has produced the Demographic Profile for Yavapai Prescott Indian Tribe, with the latest information available from the 2010 Census and the 2010 American Community Survey (5-year estimates). Once the American Community Survey (ACS) data estimates for the 5-year 2006-2010 series became available the ARPI completed the analysis, which follows in the document. This document is provided to Arizona tribes as a product of the EDA Technical Assistance grant provided by the EDA to the ARPI at Northern Arizona University.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties. Therefore, this report incorporates two major data sources. First, the official 2010 Census, primarily from the SF1 data report to produce data on the population, age, race and ethnicity relative to Yavapai Prescott Indian Tribe. The second data source is the American Community Survey, 5-year estimate data for the period 2006 to 2010 and is annotated in the document as ACS 2010 (5-year estimates). The 2010 ACS 5-year estimates are based on data collected between January 2006 and December 2010. The data were used to analyze household income, poverty rates, employment, language use and household characteristics for Yavapai Prescott Indian Tribe. Only the 5-year estimates are used as the data was provided for small geographic areas, representing the average characteristics over the 5-year period.

The analysis of demographics for Yavapai Prescott Indian Tribe first examines the 2010 Census and then the American Community Survey where data is available. Demographic characteristics are outlined by three separate levels, the State of Arizona, Yavapai County and the Yavapai Prescott Indian Tribe. Comparisons between the State of Arizona and Yavapai County serve to provide further levels of comparison when examining demographic characteristics of the tribe versus the County and the State.

Appendix C in this document contains the margins of error used to calculate the estimates for the ACS.

Population

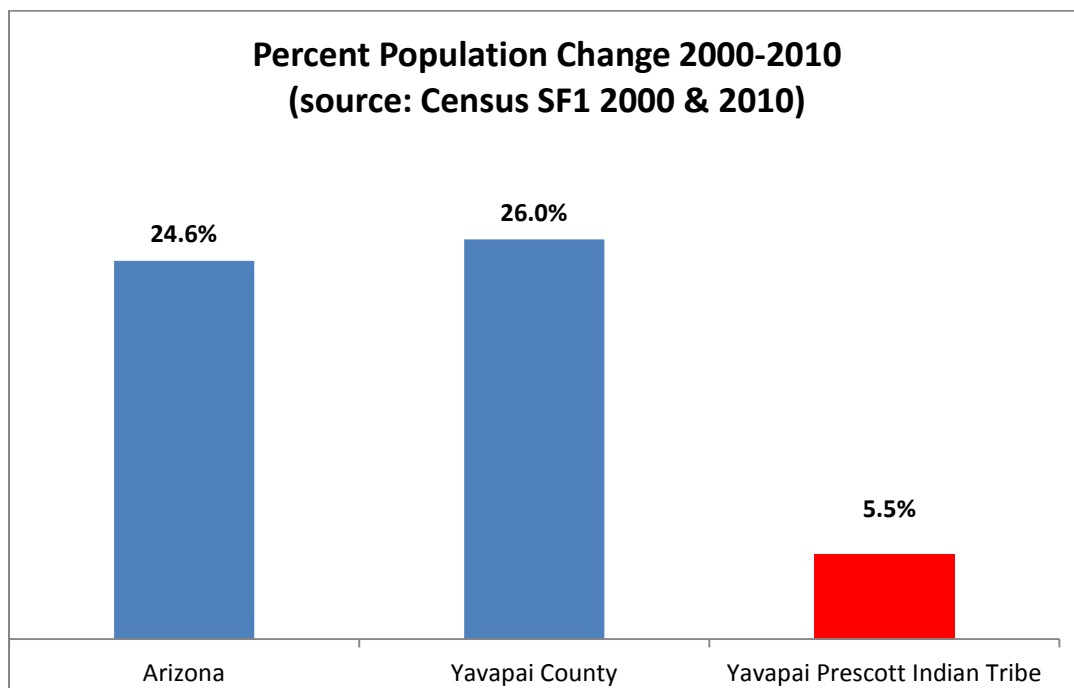

The population of the Yavapai Prescott Indian Tribe grew slightly (5.5%) in 2010 when compared to 2000. This increase in tribal members, however, may not truly reflect the actual change in the tribe between the census periods. The SF1 census is considered the official count, and accounts for only the population within the exterior boundaries of the Yavapai Prescott Indian Tribe lands. Both the State (24.6%) and the County (26.0%) grew at rates five times faster between the last census in 2000 and 2010. The Yavapai County population grew slightly faster than the State between the 2000 and 2010 Census.

Table 1. Total Population & Trends

Total Population and Trends	Arizona	Yavapai County	Yavapai Prescott Indian Tribe
Total Population 2000	5,130,632	167,517	182
Total Population 2010	6,392,017	211,033	192
Change in Population 2000-2010	24.6%	26.0%	5.5%

Source: Census 2000, 2010 SF1

Figure 1. Percent Population Change 2000 to 2010 Arizona, Yavapai County & the Yavapai Prescott Indian Tribe

Gender

There are equal numbers of females (50.0%) and males (50.0%) within the Yavapai Prescott Indian Tribe. The gender ratios in the Yavapai Prescott Indian Tribe are higher for males in both the State (49.7%) and the County (49.0%). Females (50.0%) comprise a smaller proportion of the population among the Yavapai Prescott Indian Tribe tribal members than either the State (50.3%) or the County (51.0%).

Table 2. Gender Ratios

	Arizona	Yavapai County	Yavapai Prescott Indian Tribe
Males	3,175,823	103,458	96
Females	3,216,194	107,575	96

Source: Census 2000, 2010 SF1

Age

The Yavapai Prescott Indian Tribe is dominated by those under 18 years of age. The under-18 year population accounts for 27.1 percent of all tribal members, representing a similar proportion for that age group compared to the State (25.5%) and more than Yavapai County (19.1%). The fact that one-fourth of the tribe is younger than 18 years of age carries with it important policy implications. The large portion of younger tribal members influences the provision of health and educational services as well as poverty and workforce issues as well.

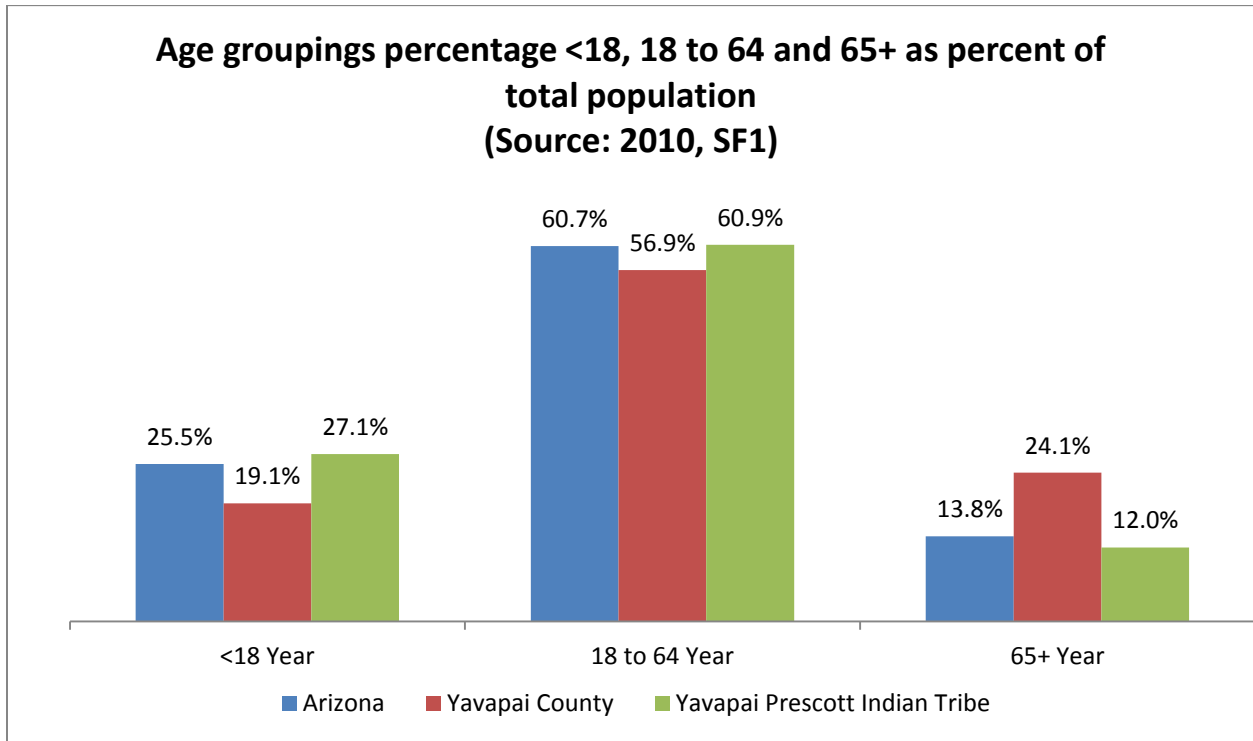

On the other hand, the tribe has more members who are 65 years or older as a proportion of the total population. This age group of retirees and those out of the workforce, accounts for 12.0 percent of tribal members when compared to 13.8 percent for the State and 24.1 percent for the County. The Yavapai Prescott Indian Tribe have a similar age profile to other Arizona tribes, with a greater percentage of tribal members under age 18. Finally, those aged 18 to 64 years account for 60.9 percent of the tribal members, which is the same as the State (60.7%) and higher than the County (56.9%). The large number of tribal young persons will have an effect on the development of the tribal workforce in the future. See Table 3 and Figure 2.

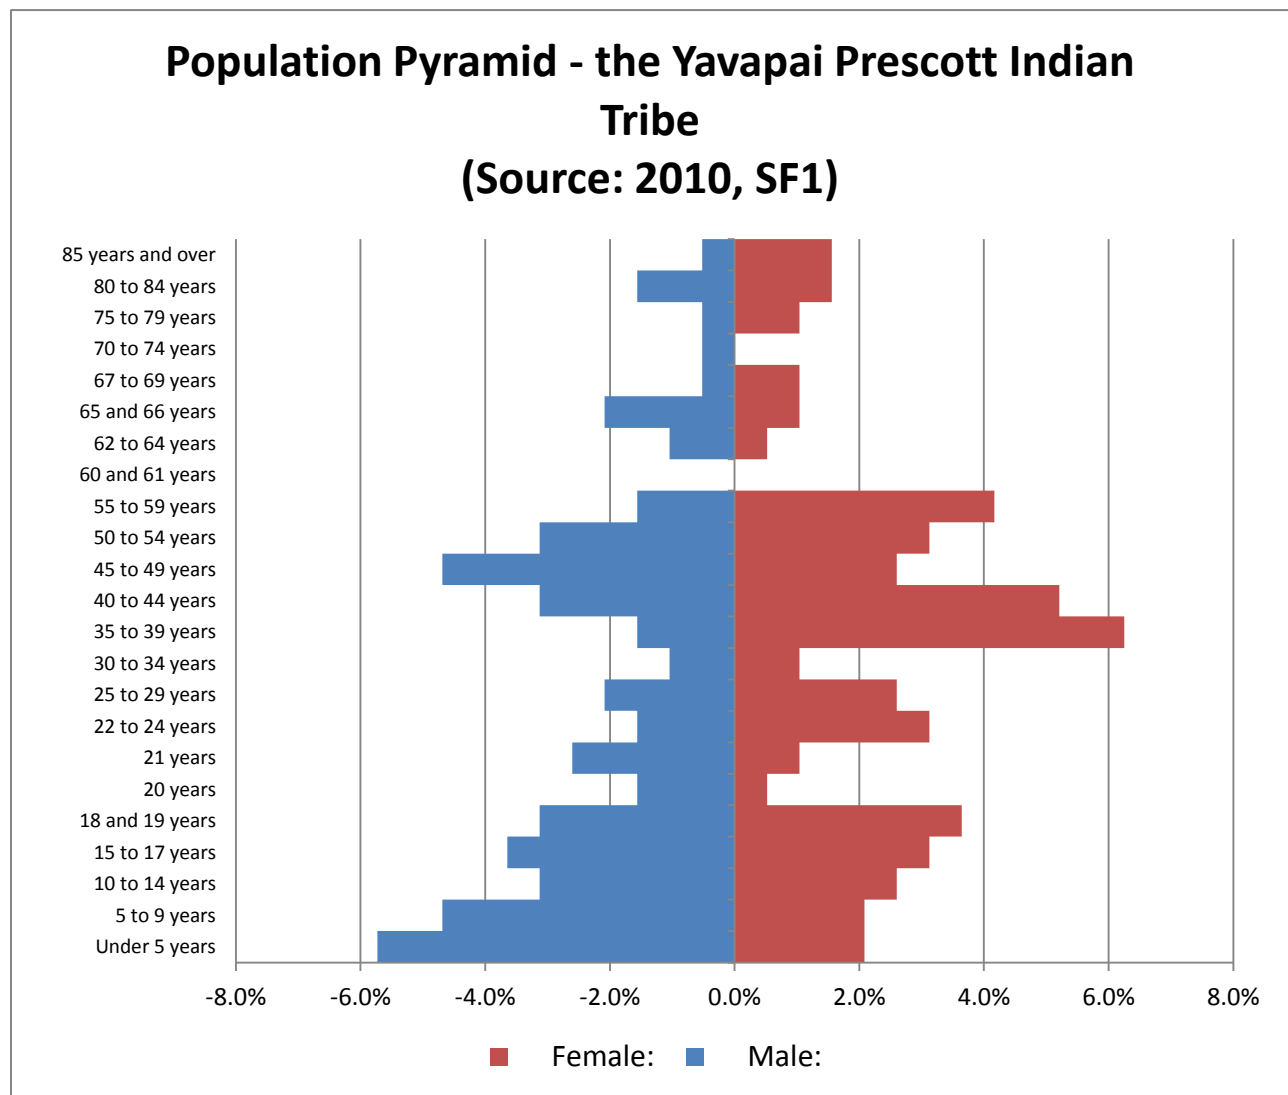

Figure 2. Age Cohorts for Arizona, Yavapai County & the Yavapai Prescott Indian Tribe 2010

A population pyramid, also called an age structure diagram, is a graphical illustration that shows the distribution of various age groups in a population (typically that of a country or region of the world), which forms the shape of a pyramid when the population is growing.

The population pyramid below (Figure 3) illustrates the difference between males and females for the 5-year age cohorts. The under-18 age cohorts are symmetrical indicating that there are an even number of males and females. The population between 60 and 61 years of age may not actually be missing from the distribution but were possibly not counted in the decennial census. At the top of the age pyramid are more females than males. This is also a demographic reality as women tend to live longer than men. The age pyramid provides an illustrated snapshot of the age structure of the tribal members at the time of the 2010 census.

Figure 3. Population Pyramid - the Yavapai Prescott Indian Tribe 2010

Population Under 18 Years

Children under 18 years of age account for 27.1 percent of all tribal members. There are 96 males and 96 female tribal members; of these, 34.4 percent are males under age 18 and 19.8 percent are females under age 18. There are more males under age 5 years (42.4%) than females (26.3%), while the sex ratios are similar for those between 5 and 10 and 11 to 17 years of age. See Table 4.

Table 4. Single year age by gender for those under 18 years of age

Total Population	Male:		Female:	
	96	Male %	96	Female %

Total Under 18 Years of age	33	100%	19	100%

Source: Census 2010 SF1

Median Age

The median age (point that splits the population where 50% are above and 50% are below) for the Yavapai Prescott Indian Tribe members is 31 years, with males and females aged 23 and 38 years respectively. The median age of tribal members is lower than both the State (36 years) and the County 49 years. This statistic serves once more to emphasize the younger age profile of the Yavapai Prescott Indian Tribe. See Figure 4.

Race

Not surprisingly, the majority of the Yavapai Prescott Indian tribal members identify themselves as American Indian or Alaska Native alone (60%), while the remaining 40 percent are split between white alone (18%) and some other race alone (5%), and multi-race persons (15%). This stands in strong contrast to the State which is 73 percent white alone, and the County which is 89 percent white alone. See Table 6.

Table 6. Race

RACE:	Arizona		Yavapai County		Yavapai Prescott Indian Tribe	
		%		%		%
Total Population	6,392,017		211,033		192

Source: Census 2010 SF1

Ethnicity

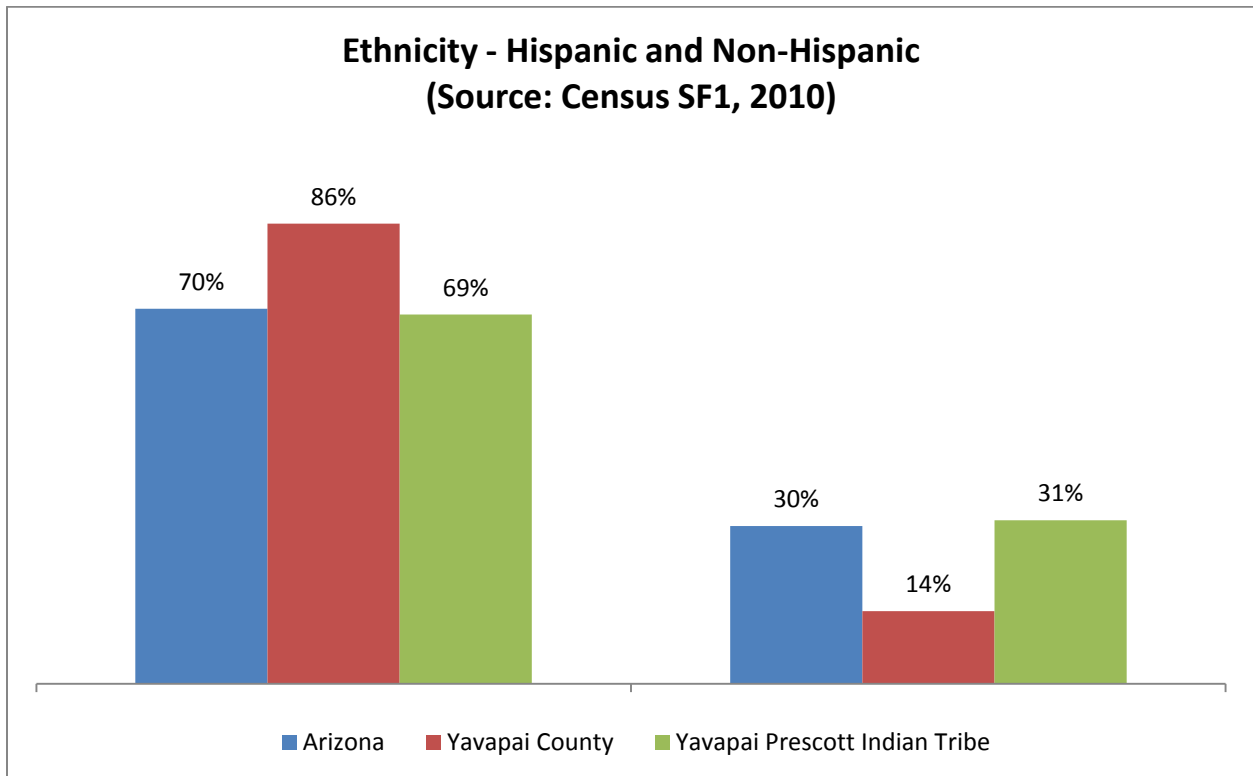

In terms of ethnicity, almost one-third (30.7%) of the Yavapai Prescott Indian Tribe members, self-identify as Hispanic or Latino. This is lower than the State (29.6%) and the surrounding County where 13.6% percent of individuals self-identify as Hispanic or Latino. See Table 7, and Figure 5.

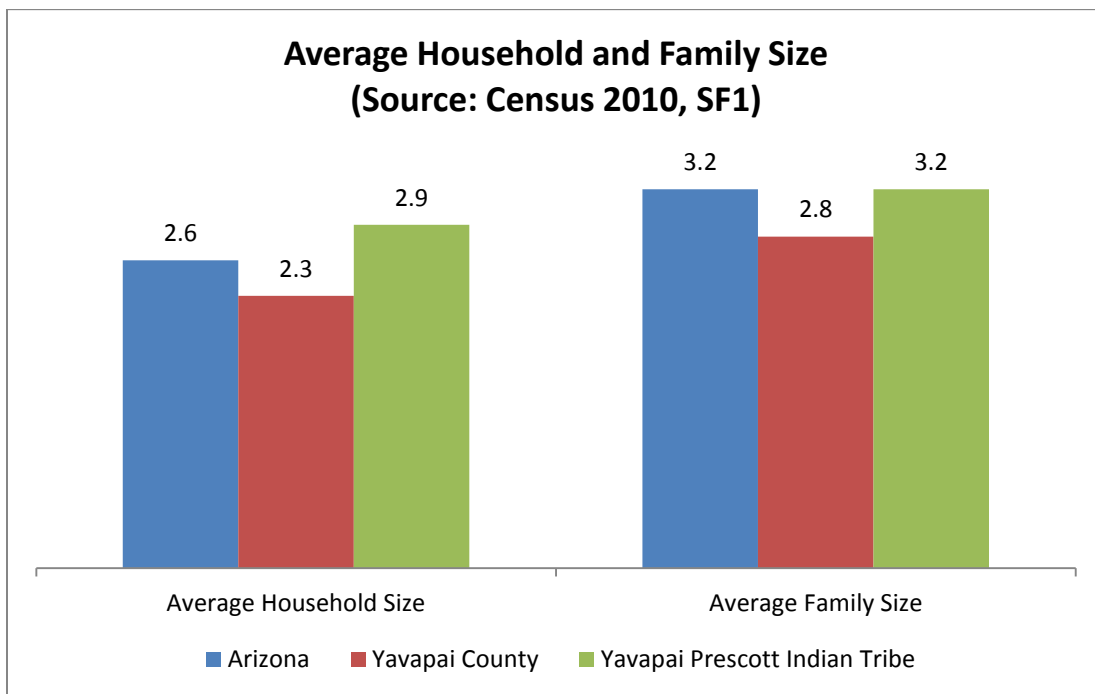

Figure 5. Ethnicity

Households

In 2010, there were 67 households on the Yavapai Prescott Indian Tribe, with an average household size of 2.9 persons and an average family size of 3.2 persons. The average household size of 2.9 persons is larger than the State average (2.6 persons) and larger than the County average (2.3 persons). The average family size for tribal members (3.2 persons) is also larger than the State and the County, where the average is 3.2 and 2.8 persons respectively. See Figure 6.

Figure 6. Average Household and Family Size

The next portion of this analysis concerns households and their structure. The Census, defines a “household” as a person or group of people who occupy a housing unit. The “householder” is a person in whose name the housing unit is owned, being bought, or rented. A “family household” consists of a householder and one or more people living together in the same household who are related to the householder by birth, marriage, or adoption — it may also include people unrelated to the householder. If the householder is married and living with his/her spouse, then the household is designated a “married-couple household.” The remaining types of family households not maintained by a married couple are designated by the sex of the householder. A “nonfamily household” consists of a person living alone or a householder who shares the home with nonrelatives only; for example, with roommates or an unmarried partner.

Family households (74.6%) predominate on the Yavapai Prescott Indian Tribe, traditional married couple families are however in the minority (37.3%) lower than the State (48.1%) or the County (50.3%). Households headed by a female head of household (single moms) account for one-fourth (25.4%) of all households. Almost three-fourths (73.5%) of all households are either married couple families (37.3%) or households headed by single mothers (25.4%). Other household structures include non-family households (25.4%), the majority of whom are unmarried partner households (10.4%). See Table 8 and Figure 7.

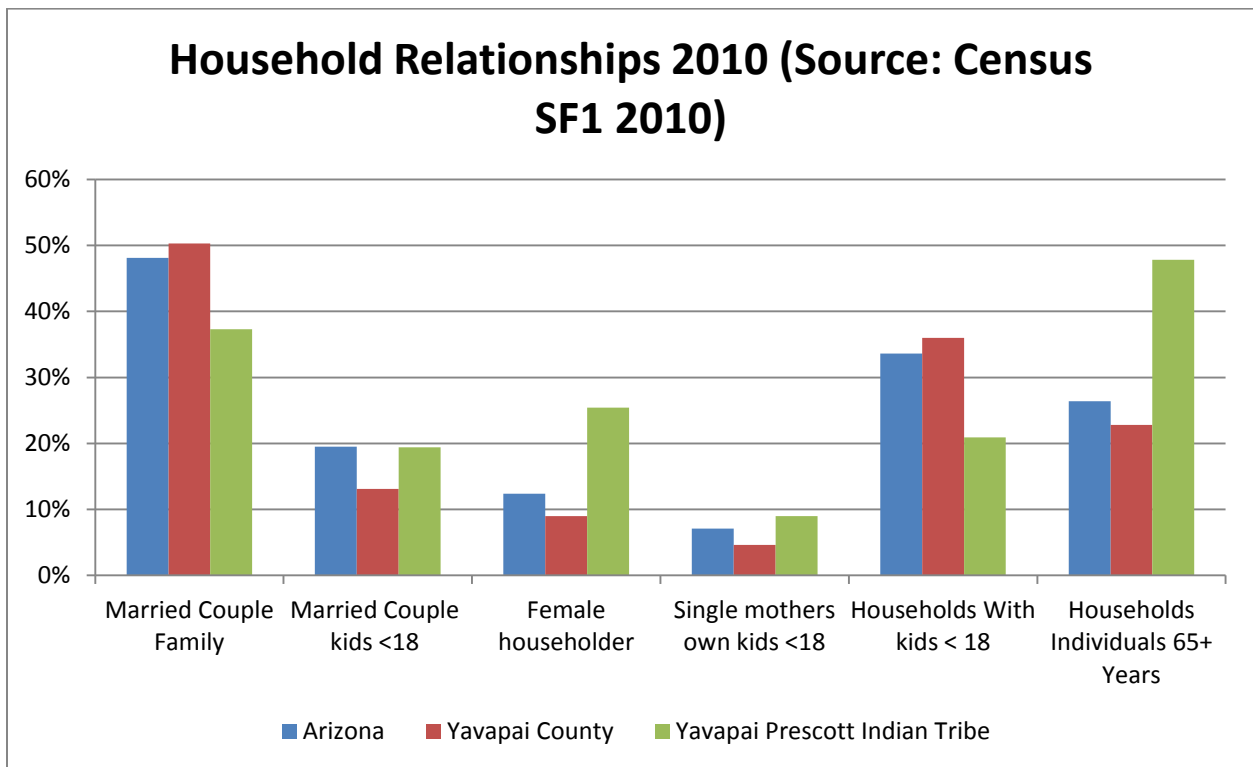

Table 8. Household Structure

	Arizona		Yavapai County		Yavapai Prescott Indian Tribe	
		%		%		%

Average Household Size	3.0		2.3		2.9	
Average Family Size	3.0		2.8		3.2	

Source: Census 2010 SF1

Unmarried partner households (10.4%) occur at a slightly higher rate in the Yavapai Prescott Indian Tribe than at the State (7.8%) or the County (6.9%). Householders with a member over age 65 account for slightly more than half (47.8%) of all households, occurring at twice the rate of the County (22.8%) and the State (26.4%). Finally, tribal households are more likely to be headed by a single mother with their own children under age 18 (9.0%) than the State (7.1%) or the County (4.6%).

Figure 7. Household Relationships

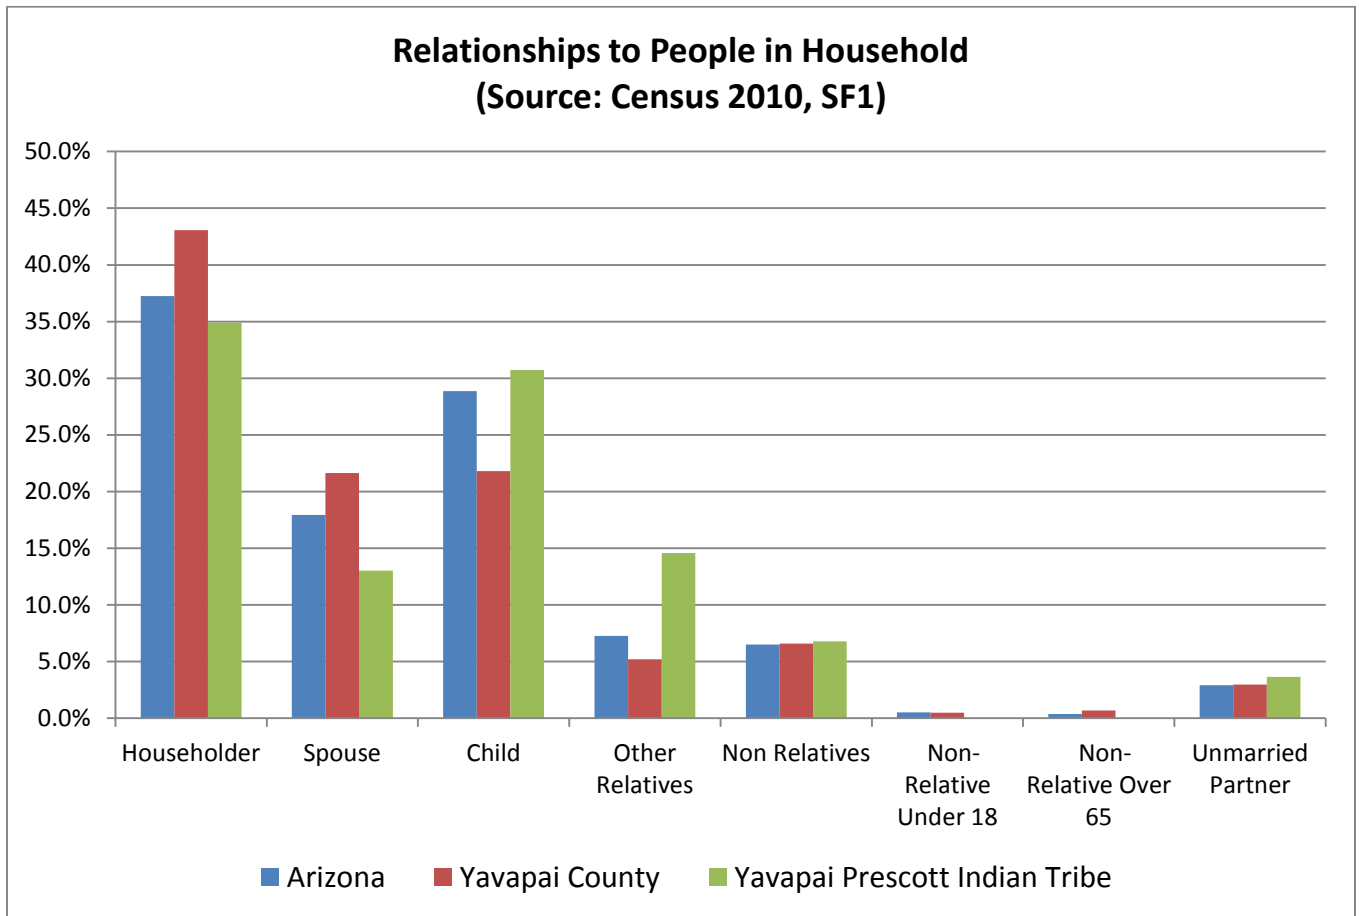

In terms of household characteristics 34.9 percent of all households are headed by a householder, lower than the State (37.2%) or the County (43.1%). Spouse-headed households comprise a minority of Yavapai Prescott Indian Tribe households (13.0%), less than the State (17.9%) or the County (21.6%). Children comprise one-third of all households (30.7%), similar to the State (28.9%) and higher than the County (21.8%). See Table 9 and Figure 8.

Table 9. Household Structure

Figure 8. Household Structure

Family households dominate among Yavapai Prescott Indian tribal members (75%), compared to 66 percent for the State and the County (63%). Non-family households account for one fourth (25%) of tribal member households, less than the State (34%) or County (37%). Husband and wife families account for half (50%) of households, whereas residents of the State (63%) and the County (63%) are more likely to live in husband and wife households. Households on the Yavapai Prescott Indian Tribe are three times more likely to be headed by a female householder (37%) with no husband present. Households headed by single mothers are far less prevalent at the State (12%) or County (9%). Households on the Yavapai Prescott Indian Tribe are almost twice as likely (48%) to have children under the age of 18 living in the household, than the State (34%) and the County (23%). See Table 10 and Figure 9.

Children Under 18 Years of Age Living with Grandparent

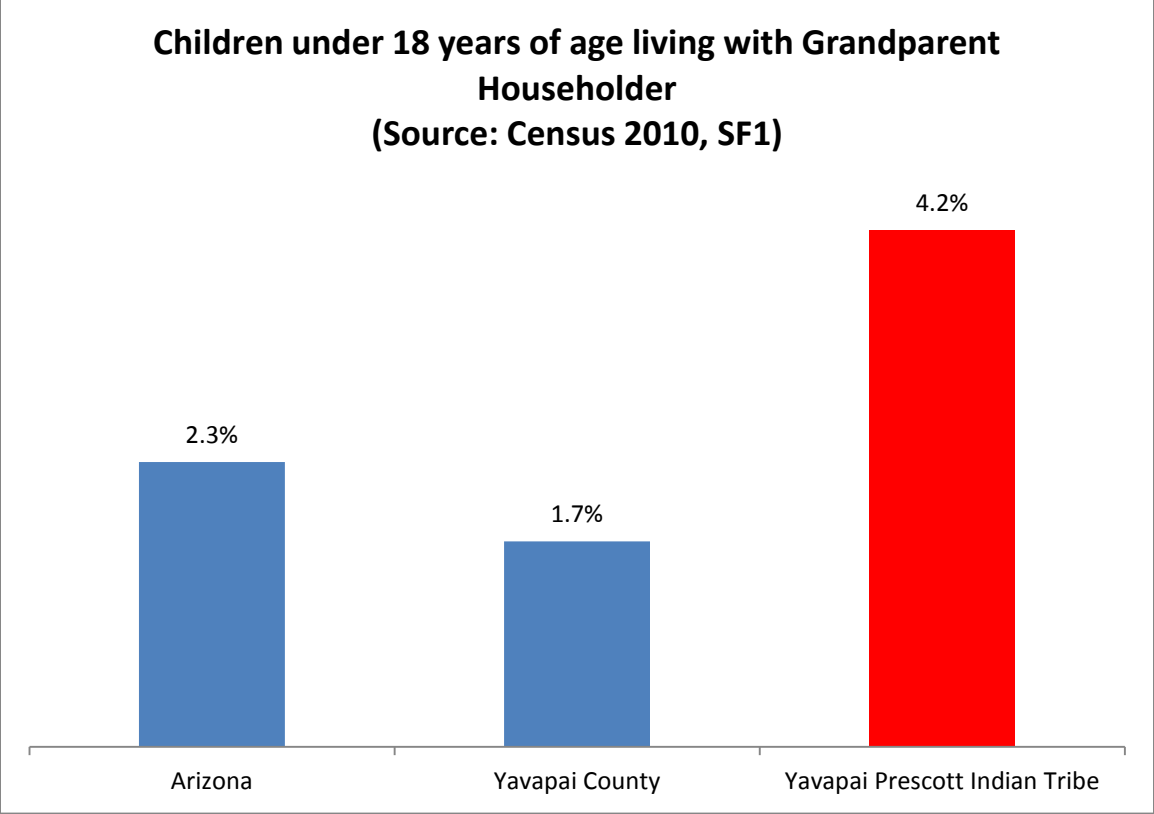

Children under age 18 are twice as likely to live with grandparents on the Yavapai Prescott Indian Tribe (4.2%) than they are at the State (2.3%) or in the County (1.7%). There are few differences between the proportions of children by 5-year age cohorts living with grandparents, when comparing the Yavapai Prescott Indian Tribe to the State and the County. See Table 11 and Figure 10.

Presence of Multi-generational Households

Households on the Yavapai Prescott Indian Tribe are twice as likely to be multi-generational (7.5%), than the State (4.9%) and the County (2.9%). The Census defines multi-generational families as family households consisting of more than two generations, such as a householder living with his/her children and grandchildren. Multi-generational family households may be more likely to reside in areas where new immigrants live with their relatives, in areas where housing shortages or high costs force families to double up their living arrangements, or in areas that have relatively high rates of out-of-wedlock childbearing. See Figure 11.

Figure 11. Presence of multi-generational households

Household Income

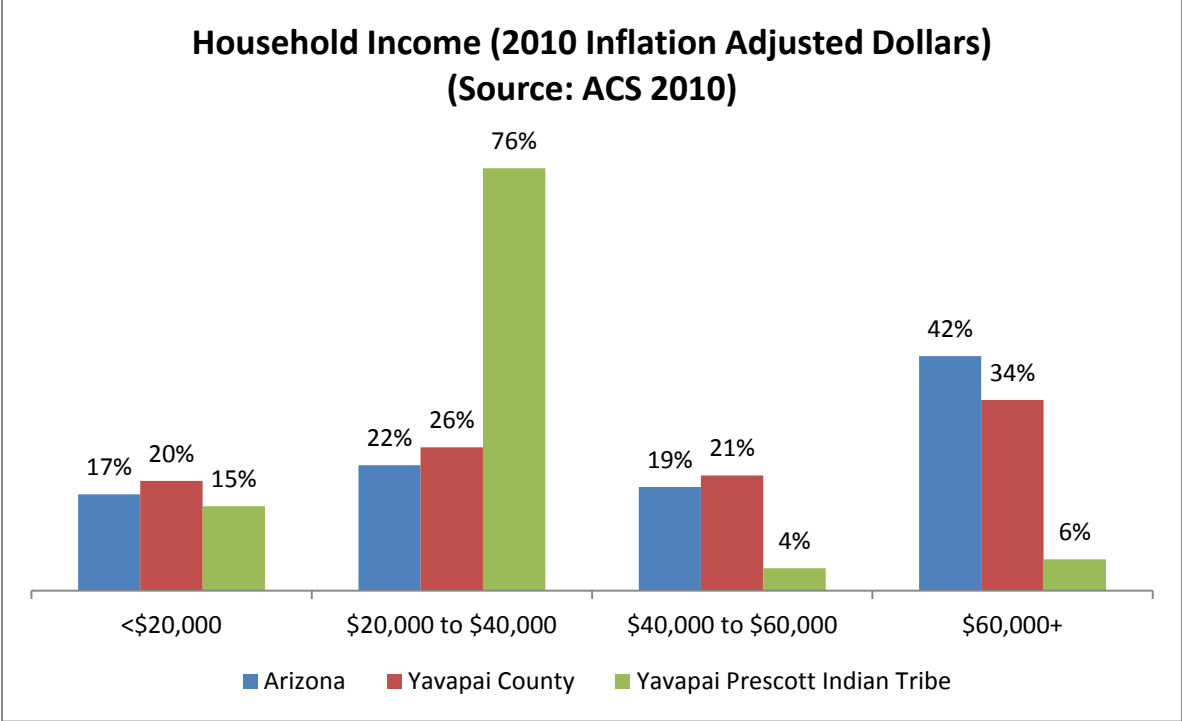

The median household income for the Yavapai Prescott Indian Tribe is \$22,000, about half that of the County (\$43,290) and the State (\$51,310). Tribal members are more likely to have lower household incomes than both the State and the County. Less than one-fifth (15%) of all households on the Yavapai Prescott Indian Tribe have incomes of less than \$20,000 when compared to the State (17%), and the County (20%). Tribal members are more likely to have household incomes between \$20,000 and \$40,000 (75%), three times the proportion at the State (22%) and the County (26%). A minority (6%) of tribal members have incomes in excess of \$60,000. See Table 12 and Figure 12.

Other Income

Per capita Income on the Yavapai Prescott Indian Tribe (\$11,338) is far lower than the per capita income for the County (\$25,527) and the State (\$25,680). Correspondingly, the median earnings for workers (\$22,589) are slightly lower than both the County (\$24,592) and the State (\$29,573). See Table 14

Table 14. Other Income Measures (In 2010 Inflation-Adjusted Dollars)

Poverty

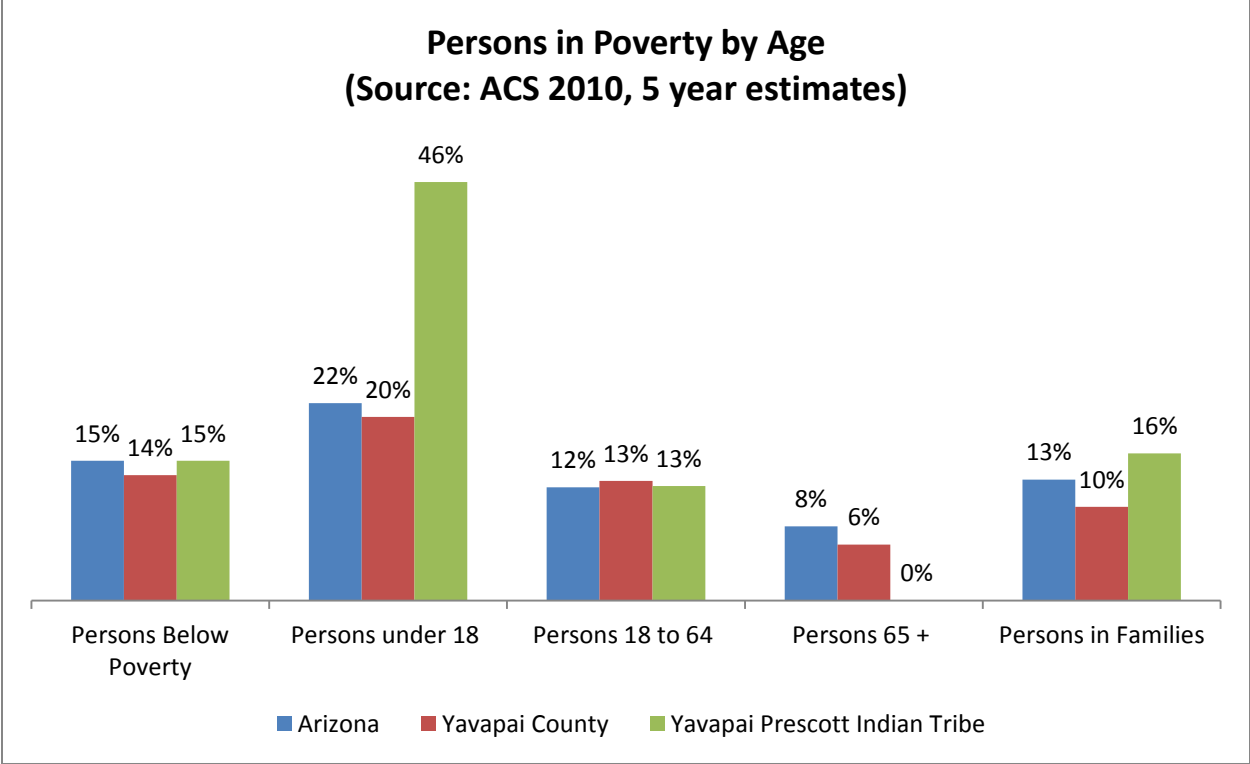

Poverty rates on the Yavapai Prescott Indian Tribe (15%) are the same rate as the State (15%) and the County (14%). Almost half (46%) of all children under 18 years of age are considered to be living in poverty, while one-tenth (13%) of tribal members between 18 and 64 also live in poverty. One-tenth (16%) of persons living in families on the Yavapai Prescott Indian Tribe live in poverty, a higher rate than families in poverty at the State level (13%) or the County (10%). See Table 15 and Figure 14.

Children in Poverty

The rates of children under 18 years of age living in poverty are similar for the tribe (15%), the State (15%) and the County (14%). The highest poverty rates for tribal members are recorded for those children between 6 and 17 years of age, where 50 percent of these school age children live below the poverty level. See Table 16.

Households in Poverty

The Census Bureau uses a set of money income thresholds that vary by family size and composition to determine who is poor. If a family's income is less than a family's threshold, then that family and every individual in it, is considered poor. Further the ratio of income to poverty can be used to measure the degree or depth of poverty. The ratio of income to poverty compares a person's income with their poverty threshold, and expresses the comparison as a fraction. For example, a poverty ratio of 1.0 (income at 100% of poverty level) means a person is living right at the poverty line; a ratio of 0.5 (income at 50% of poverty level) would mean that a person is living in a household making only half the income designated as the poverty threshold. The Census Bureau describes those with family incomes below one half of their poverty threshold as being "severely poor." People with incomes at or above their threshold but below 125 percent of their threshold are classified as "near poor."

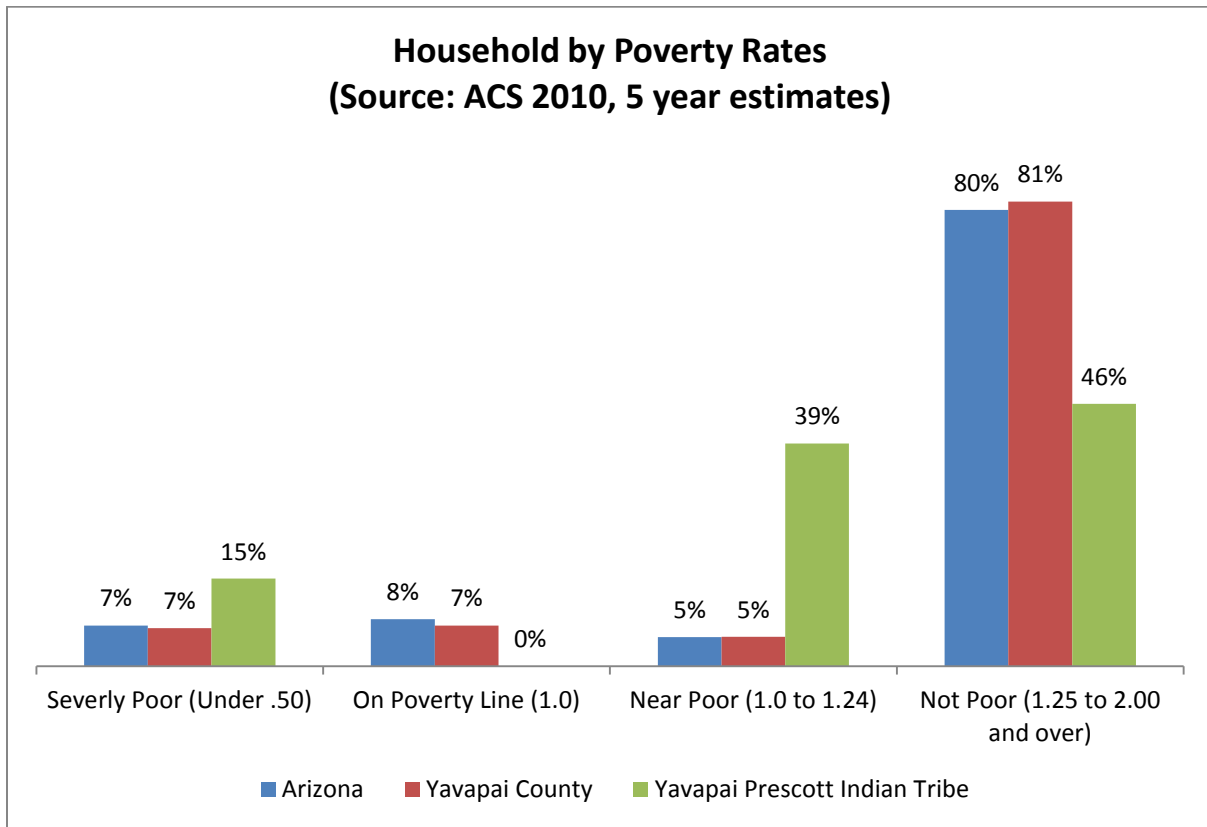

About one in eight households (15%) on the Yavapai Prescott Indian Tribe are classified as "severely poor," with poverty ratios that ranges from below 0.5 to .99. These rates are similar to those of the State (15%) and the County (14%). A further two-fifths (39%) of tribal members are classified as "near poor" with poverty ratios between 1.00 and 1.24, three times the rate of the State and County. The data indicates that 54 percent of households are below the poverty line, while the remaining 46 percent are located above the poverty line. See Table 17 and Figure 15.

**APPENDIX C:
THE YAVAPAI PRESCOTT INDIAN TRIBE
AMERICAN COMMUNITY SURVEY 2010, 5-YEAR ESTIMATES
MARGIN OF ERROR ESTIMATES**

ACS Margin of Error Estimates

The ACS estimates are based on data from a sample of housing units and people in the population, not the full populations. For this reason, ACS estimates have a degree of uncertainty associated with them, called sampling error. In general, the larger the sample, the smaller the level of sampling error. The ACS calculates standard errors for each estimate produced and publishes the 90 percent confidence level margins of error (the Census Bureau standard). You can be 90 percent confident that the interval within the margin of error from the estimate includes the true value. Users can add and subtract the margin of error value from the estimate to find the top and bottom of the range within which the ACS is 90 percent confident in their estimate lies.

Understanding margin of error

A term you will often come across in survey research is "within the margin of error." Most people hear the term frequently during election season when results from polls are reported. Many surveys and polls collect data from a representative sample of a population to make determinations about a larger population. Results would be somewhat different each time the survey is administered to a different representative sample. The margin of error accounts for these differences by calculating an upper and lower boundary the true result would likely fall between if every member of population was surveyed.

For example, in the case of the Yavapai Prescott Indian Tribe the ACS has established that there are 126 households represented on the Yavapai Prescott Indian Tribe Reservation. The survey also indicates that there are 112 family households (families) with a margin of error of plus or minus (\pm) 14.8 percent and 88.9 percent of the respondents responding indicated that they were in fact family households. The margin of error tells us that if the same survey were administered to the Yavapai Prescott Indian Tribal members again, it is highly probable that the percent of "family household" responses would be between 74.1 percent and 100 percent, or 88.9 percent \pm 14.8 percent.

Two or more races	0	+/-132	0.0%	+/-13.5
Two races including Some other race	0	+/-132	0.0%	+/-13.5
Two races excluding Some other race, and Three or more races	0	+/-132	0.0%	+/-13.5
Total housing units	126	+/-93	(X)	(X)

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.
